The Fishery Management Reports series was established in 1989 by the Division of Sport Fish for the publication of an overview of management activities and goals in a specific geographic area, and became a joint divisional series in 2004 with the Division of Commercial Fisheries. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.adfg.alaska.gov/sf/publications/>. This publication has undergone regional peer review.

ABSTRACT

This report summarizes the 2010 commercial and subsistence salmon fisheries of the Alaska Peninsula, Aleutian Islands, and Atka-Amlia Islands Management Areas. Commercial salmon harvests in the Alaska Peninsula and Aleutian Islands areas were 10,622 Chinook *Oncorhynchus tshawytscha*, 3,505,353 sockeye *O. nerka*, 226,787 coho *O. kisutch*, 867,289 pink *O. gorbuscha*, and 1,054,056 chum salmon *O. keta*. Total exvessel value in the Alaska Peninsula and Aleutian Islands areas was approximately \$22,608,464.

In total, 183 subsistence salmon permits were issued in the Alaska Peninsula Area in 2010 and an estimated 288 Chinook salmon, 9,530 sockeye salmon, 2,578 coho salmon, 1,001 pink salmon, and 1,202 chum salmon were harvested. In the Unalaska District, 217 subsistence salmon permits were issued and 2 Chinook salmon, 3,988 sockeye salmon, 307 coho salmon, 388 pink salmon, and 26 chum salmon were harvested. Two subsistence salmon permits were issued in the Adak District and 50 sockeye salmon were harvested.

The 2010 North Alaska Peninsula Chinook salmon escapement of 9,387 was below the 2000–2009 average of 21,613 fish, and the sockeye salmon escapement of 913,139 was below the 2000–2009 average of 1,244,097 fish. All major sockeye salmon stocks achieved or exceeded escapement goals. The South Alaska Peninsula sockeye salmon escapement of 38,039 was well below the most recent 10-year average of 134,773. Limited aerial surveys were flown for coho salmon on the Alaska Peninsula, therefore total escapements were not estimated. The South Alaska Peninsula pink salmon estimated escapement of 742,912 was below the 2000–2009 average of 4,169,721 fish. The entire Alaska Peninsula chum salmon escapement of 581,322 was below the most recent 10-year average of 1,175,170 fish. All Alaska Peninsula chum salmon escapement goals were met, except the Southeastern and South Central District aggregate goals.

Key words: Fishery management report, Aleutian Islands, Atka-Amlia Islands, Alaska Peninsula, Area M, Area F, exvessel value, escapement, aerial surveys, commercial salmon fishery, subsistence salmon fishery, personal use salmon fishery, Chinook salmon, *Oncorhynchus tshawytscha*, sockeye salmon, *Oncorhynchus nerka*, coho salmon, *Oncorhynchus kisutch*, pink salmon, *Oncorhynchus gorbuscha*, chum salmon, *Oncorhynchus keta*.

INTRODUCTION

This report summarizes commercial salmon exvessel value, harvest, subsistence, personal use fishing, and escapement information for all of Alaska Peninsula and Aleutian Islands (Area M) as well as Atka-Amlia Islands (Area F). In addition, this report provides historical information for comparison to recent harvest, subsistence and escapement information. Further details of commercial harvests and escapements can be found in the following reports: 1) *North Alaska Peninsula Commercial Salmon Annual Management Report, 2010* (Hartill and Murphy 2011), 2) *South Alaska Peninsula Commercial Salmon Annual Management Report*, (Poetter et al. 2011) and 3) *Aleutian Islands and Atka-Amlia Islands Management Areas Annual Salmon Management Report, 2010* (Poetter and Keyse *In prep*). Appendices of this report contain reference information including exvessel value information (Appendix A), harvest information (Appendix B), subsistence information (Appendix C), escapement information (Appendix D), regulations (Appendix E), and a personnel list (Appendix F). A separate report (Foster *In prep*) provides estimated 2010 catch and escapement age, sex, and length data.

The Alaska Peninsula and Aleutian Islands Management Areas (collectively referred to as Area M) and the Atka-Amlia Management Area (Area F) are divided into four subareas: 1) the North Alaska Peninsula (5 AAC 09.100), consisting of Bering Sea waters extending west from Cape Menchikof to Cape Sarichef on Unimak Island; 2) the South Alaska Peninsula (5 AAC 09.100), consisting of Pacific Ocean coastal waters extending west of Kupreanof Point to Scotch Cap on Unimak Island; 3) the Aleutian Islands (5 AAC 12.100), consisting of the Bering Sea and Pacific Ocean waters of the Aleutian Islands west of Unimak Island, the Pribilof Islands and exclusive of the Atka-Amlia Management Area; and 4) the Atka-Amlia Management Area (5 AAC 11.101),

consisting of Bering Sea and Pacific Ocean waters extending west of Seguam Pass (172°50.00' W long) and east of Atka Pass (175°23.00' W long; Figure 1). Managers in each geographical region are responsible for reporting the harvest and escapement that occur within its boundaries.

In the Alaska Peninsula Management Area, the Alaska Department of Fish and Game (ADF&G) operates seasonally staffed offices located in Sand Point, Cold Bay, and Port Moller (Figure 2 and Appendix G1). Historically, most of the Alaska Peninsula and Aleutian Islands commercial salmon and Pacific herring *Clupea pallasii* fishery management was directed from the Cold Bay office. In 1990, the Sand Point staff assumed responsibility for managing salmon in the Southeastern District (Figure 3). In 1992, the Port Moller staff assumed responsibility for managing salmon in the Herendeen-Moller Bay, Port Moller Bight, Bear River, Three Hills, and Ilnik sections (Figure 4) of the Northern District. In 2005, the Port Moller staff also assumed responsibility for managing salmon in the Cinder River, Inner Port Heiden, Nelson Lagoon, and Black Hills sections (Figure 4). The Northwestern, Unimak, and Southwestern districts of the Alaska Peninsula are still managed from the Sand Point office with support from the Cold Bay office. The Aleutian Islands and Atka-Amlia Islands Management Areas salmon fisheries are managed cooperatively by staff in Cold Bay and Sand Point with assistance from the Dutch Harbor office (Figures 1 and 5). The balance of the South Alaska Peninsula portion of Area M is managed from the Sand Point office.

COMMERCIAL FISHERIES

A list of commercial salmon statistical areas is provided in Appendix A1 for reference to the ADF&G statistical maps and the electronic fish ticket database. Physical descriptions of the districts and sections are given in 5 AAC 09.200.

Legal salmon gear types allowed in the Alaska Peninsula Management Area include seine, drift gillnet, and set gillnet (5 AAC 09.330). Portions of the Alaska Peninsula Management Area are closed to one or two of the three gear types. Purse, beach, and hand seines are the only legal commercial fishing method for salmon in the Aleutian Islands Management Area (5 AAC 12.330). In the Atka-Amlia Area, salmon may be taken by purse seine and set gillnet only (5 AAC 11.333).

Commercial salmon fisheries in the Alaska Peninsula Area date back to at least 1882, when canneries were reportedly constructed on the South Alaska Peninsula at Orzinski (Orzenoi) Bay and Thin Point Cove (Freeburn 1976). The earliest catch records for the Alaska Peninsula Management Area date back to 1906 (Figures 6–10; Appendix B1). Early season catches on the Alaska Peninsula were predominantly sockeye salmon, with minimal Chinook and coho salmon harvest. Both pink and chum salmon harvests exceeded 500,000 for the first time in 1916, and has remained well above these harvest levels since 1978 for both species.

Exvessel Value

In 2010, seven companies purchased salmon from Area M fishermen (Appendix A2), with an estimated salmon harvest value (exvessel) for all gear types of \$22,608,464 (Appendices A3 and A4). This was well above the previous ten year average (2000–2009) of \$18,812,200 (Appendix A4). Of the total exvessel values in Area M, approximately 20% (\$4,540,853) came from the South Unimak and Shumagin Islands June fisheries, approximately 55% (\$12,506,812) came from the North Alaska Peninsula, approximately 2% (\$45,882) came from the Aleutian Islands, and the remaining 23% (\$6,588,675) came from the Post-June and Southeastern District

Mainland (SEDM) fisheries (Figure 3; Appendix 3). Drift gillnet permit holders accounted for most of the sockeye salmon landings in 2010 (exvessel value \$12,308,805), followed by seine (\$3,226,659) and set gillnet permit holders (\$2,676,218; Appendix A4). Sockeye salmon provided the bulk of the exvessel revenues for fishermen in Area M and accounted for about 81% of the total value of all salmon landings in 2010.

The average exvessel price per pound for all salmon declined substantially from 1988 to 2001, but since 2001 there has been a slight increase. This trend continued in 2010, when prices increased for all species compared to 2009 prices (Appendix A5).

The average weight of commercially caught sockeye, coho, pink, and chum salmon vary from year to year, but has remained relatively consistent over the long term (Appendix A5). However, since 1979 the general trend of Chinook salmon average weight has decreased from an average of 22.9 pounds in 1979 to a low of 12.9 pounds in 2008. In 2010 the average weight was 13.8 pounds.

Harvest

In total, 63 of the 119 available seine, 142 of 162 available drift gillnet, and 84 of 113 available set gillnet Area M permits were fished in 2010 (Appendix A6). The number of seine and drift gillnet permits fished were higher than the most recent ten year average, while the number of set gillnet permits fished was lower.

Salmon stocks targeted in Area M varies throughout the season. Salmon harvested in the South Unimak and Shumagin Islands June fisheries include stocks migrating to a wide range of locations, including Bristol Bay and the Arctic-Yukon-Kuskokwim (AYK) regions (5 AAC 09.365). The Southeastern District Mainland, located southwest of the Chignik Management Area, is managed primarily on the basis of the Chignik River sockeye salmon run prior to July 26 (Figure 3; 5 AAC 09.360; Appendix E1). The remaining fisheries are managed on the basis of local run strength and escapements such as the sockeye salmon fishery on the North Alaska Peninsula and the South Alaska Peninsula pink and chum fisheries.

In 2010, the Alaska Peninsula Area commercial harvest (excluding test fishery harvests) was 10,622 Chinook salmon, 3,505,353 sockeye salmon, 226,787 coho salmon, 867,289 pink salmon, and 1,054,056 chum salmon for a total of 5,664,107 fish (Figures 6–10; Appendices B1 and B2). The total harvest was much lower than the 2000–2009 average commercial salmon harvest of 11,981,868 fish. The large discrepancy between the 2010 harvest and the previous ten-year average is a direct result of the low pink salmon returns in 2010.

The harvest of all species combined was 53% below the previous 10-year average. Compared to their respective 10-year average, in 2010 the Chinook salmon harvest was <1% above, the sockeye salmon harvest was about 11% below, the coho salmon harvest was about 14% below, the pink salmon harvest was about 87% below, and the chum salmon harvest was about 2% above. The 2010 harvest information, by area, can be found in Appendix B2.

During 2010, in the Alaska Peninsula, Aleutian Islands, and Atka-Amlia Islands areas, seine fishermen harvested approximately 62% of the Chinook salmon, 19% of the sockeye salmon, 63% of the coho salmon, 93% of the pink salmon, and 74% of the chum salmon (Appendix B3). Drift gillnet fishermen harvested approximately 32% of the Chinook salmon, 69% of the sockeye salmon, 18% of the coho salmon, 1% of the pink salmon, and 16% of the chum salmon (Appendix B3). Set gillnet fishermen harvested about 6% of the Chinook salmon, 12% of the

sockeye salmon, 19% of the coho salmon, 6% of the pink salmon, and 10% of the chum salmon (Appendix B3).

In 2010 ADF&G test fisheries were conducted near the Shumagin Islands in the South Alaska Peninsula management area, and at the mouth of Bear River in the North Alaska Peninsula management area (Figures 2 and 3). The total test fishery catch for the Shumagin Islands was 12,398 salmon while the Bear River total was 2,373 salmon (Appendix B4). The Shumagin Islands test fishery was conducted in early July to estimate immature salmon abundance that may be caught in the commercial fishery incidental to the targeted mature fish. The North Peninsula test fishery was conducted during fishery closures between the early and late sockeye salmon runs in early August to estimate possible marine build-up of sockeye salmon bound for Bear River.

In 1991, the Alaska Board of Fisheries (BOF), created an open-to-entry set gillnet salmon fishery around the Atka and Amlia islands (Area F). Area M Commercial Fisheries Entry Commission (CFEC) seine permit holders may still seine for salmon in the Atka-Amlia Islands Area (5 AAC 11.333). However, a commercial salmon harvest has only occurred four times in Area F since 1991, the most recent being in 1996.

The Cinder River and Inner Port Heiden sections and Ilnik Lagoon (part of the Ilnik Section) of the Alaska Peninsula Area comprise an overlap area where both Alaska Peninsula (Area M) and Bristol Bay (Area T) permit holders are allowed to fish during certain periods (Figure 4; 5 AAC 39.120(d)). Area M permit holders are allowed to fish anytime during open fishing periods in the overlap area. Area T permit holders may fish during open fishing periods from January 1 through June 30 and August 1 through December 31 in the Cinder River and Inner Port Heiden sections. Area T fishermen may fish in Ilnik Lagoon during open fishing periods from August 1 through December 31. In 2010, no permit holders fished in the overlap area (Appendix A7).

SUBSISTENCE AND PERSONAL USE FISHERIES

Under Alaska state law, subsistence fishing allows the taking of fish by specific means by a resident in a rural area of the state. Subsistence use of wild resources are defined as noncommercial, customary, and traditional uses for a variety of purposes. These include: direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation, for the making and selling of handicraft articles out of non-edible by-products of fish and wildlife resources taken for personal or family consumption, and for the customary trade, barter, or sharing for personal or family consumption (AS 16.05.940 (33)). Whenever it is necessary to restrict harvests, subsistence fisheries have a preference over other uses of the stock (AS 16.05.258(b)(4)(A)).

Personal use fisheries differ from subsistence fisheries in that they do not meet the criteria established by the Joint Board of Fisheries and Game for identifying customary and traditional fisheries (5 AAC 99.010), or because they occur within non-subsistence areas where dependence upon subsistence is not a principle characteristic of the economy, culture, and way of life (AS 16.05.258(c)). Personal use fisheries provide opportunities for harvesting fish with gear other than rod and reel in non-subsistence areas. However, personal use fisheries do not have the priority over other uses of the resource in times of restricted harvest that subsistence fisheries do.

The Alaska Peninsula, Aleutian Islands, and Pribilof Islands communities of Sand Point, King Cove, Cold Bay, False Pass, Nelson Lagoon, Port Moller, Port Heiden, Akutan, Atka, Adak, Unalaska, Nikolski, St. George, and St. Paul rely on local resources for subsistence (Figures 1-5). Subsistence salmon permits are issued to residents in some of these areas through the ADF&G offices in Sand Point, Cold Bay, Port Moller, and Dutch Harbor. Information from returned subsistence permits is used to extrapolate catches for all permits issued¹. Some fish are likely retained from commercial catches for home pack that are not reported on fish tickets or subsistence permits. There is no extrapolation from fish tickets to account for these salmon, and commercial catch retained for home pack is not compiled in this report. Subsistence permits are not required in the Akutan, Umnak, Pribilof Islands, and Atka-Amlia areas; consequently, no catch estimates are available for the communities of Akutan, Nikolski, Atka, St. George, and St. Paul.

The Atka-Amlia Islands Area, as defined in the commercial fishing regulations, is considered a district of the Aleutian Islands Area in the subsistence fishing regulations (Figure 1). From 1988 through 1997, subsistence salmon fishing was not allowed in the Adak District. However, a personal use salmon fishery was allowed on Adak and Kagalaska Islands for Alaska residents during 1988–1997. Beginning in 1998, subsistence salmon fishing was again allowed in the Adak District (permits were required).

In 2010, a total of 183 subsistence permits were issued in the Alaska Peninsula Area (Appendices C1 and C2). This was more than the 134 permits issued in 2009 and above the 2005–2009 average of 157 permits. In the Aleutian Islands, 217 permits were issued for the Unalaska District (Figure 5 and Appendix C2). This is more than the 215 permits issued in 2009, and above the 2005–2009 average of 203 permits issued (Appendix C1). There were 2 permits issued for the Adak District, which is well below the 2005–2009 average of 5 permits (Figure 1; Appendices C2 and C3). In 2010, about 69% of the Alaska Peninsula Area, 68% of the Unalaska District, and 50% of the Adak District subsistence permit reports were completed and returned to ADF&G (Appendix C2).

The species and number of salmon harvested for subsistence varies considerably among communities (Appendices C1–C3). This may be due to annual differences in salmon availability and species preference within each community. The 2010 Alaska Peninsula Area subsistence salmon harvest was an estimated 14,599 salmon, composed of 288 Chinook salmon, 9,530 sockeye salmon, 2,578 coho salmon, 1,001 pink salmon, and 1,202 chum salmon (Appendices C1 and C2). The Alaska Peninsula Area subsistence salmon harvest has been showing a general decline in recent years after historic peak harvests of 26,096 fish in 1997. The 2010 subsistence salmon harvest was above the 2005–2009 average of 13,062 fish in the Alaska Peninsula Area. The subsistence salmon harvest in the Unalaska District during 2010 was an estimated 4,711 salmon, composed of 2 Chinook salmon, 3,959 sockeye salmon, 307 coho salmon, 388 pink salmon, and 26 chum salmon (Figure 5; Appendices C1 and C2). The 2010 subsistence salmon harvest in Unalaska was greater than the 2005–2009 average of 3,890 fish. The Adak District subsistence salmon catch in 2010 was estimated to be 50 sockeye salmon (Figure 1; Appendices C2 and C3). The 2010 sockeye salmon subsistence harvest was considerably less than the 2005–2009 average of 247 fish.

¹ An average catch per permit holder is calculated from returned permits and applied to unreturned permits *in absentia*. This assumes that permits which were issued but not returned were fished successfully at the same rate, and with the same average catch, as permits that were returned.

In 2010, 9 non-local permit holders fished in Mortensens Lagoon along with 20 residents of Cold Bay and 12 residents of King Cove (Appendix C4). During the five most recent years, 2005–2009, the average number of non-local permit holders fishing in Mortensen’s Lagoon was 4 compared to 14 local permit holders from Cold Bay and 9 local permit holders from King Cove (Appendix C5). In 2010, an estimated 1,748 sockeye salmon and 156 coho salmon were harvested in Mortensens Lagoon (Appendix C4).

Thin Point Lagoon, located approximately 12 air miles west of King Cove, is an important source of subsistence sockeye and coho salmon for residents of King Cove. In 2010, an estimated 1,562 sockeye and 763 coho salmon were harvested from Thin Point Cove by 16 King Cove permit holders and 2 non-local permit holders from Cold Bay (Appendices C6 and C10). Lenard Harbor, near the King Cove road system, has been an important source of coho salmon for subsistence purposes in the past; in 2010, however only 4 subsistence permit holders harvested 86 coho salmon (Appendices C7 and C8).

Major Unalaska Island subsistence salmon fishing locations used in 2010 are listed in Appendix C9. The Reese Bay subsistence fishery, on Unalaska Island, targets sockeye salmon returning to McLees Lake (Palmer 2003) and appears to be fully utilized by subsistence fishermen during most years (Shaul and Dinnocenzo 2005). In 2010, Reese Bay subsistence sockeye salmon harvest was estimated to be 3,583 fish and represents 90% of the total Unalaska District catch, and was greater than the 2005–2009 average subsistence harvest of 1,913 sockeye salmon (Figure 1; Appendices C9 and C10). In 2010, as in many years, Reese Bay received more fishing effort than any other location on Unalaska Island. Subsistence harvest in 2008 was the lowest since 1996, but over the past two years there has been an trend of increased subsistence harvest.

The Adak District subsistence salmon harvest primarily consists of sockeye salmon taken at Quail Bay and Galas Point on Kagalaska Island and at Hidden Bay on Adak Island (Figure 1). A few pink and coho salmon are also harvested on the north side of Adak Island. After 1993, the personal use effort decreased from previous years due to reductions in U.S. Navy personnel stationed at Adak. In 1997, the civilian population of Adak increased because of military base cleanup work, which resulted in an increase in the number of permits issued and salmon harvested. A total of 18 permits were issued in 1997 and an estimated 229 sockeye salmon and 4 chum salmon were harvested (Appendix C3). Currently there are no Navy personnel in Adak, thus in the five most recent years, 2005–2009, an average of 5 Adak District subsistence permits were issued with an average harvest of 234 sockeye salmon, 1 coho salmon and 12 pink salmon harvested. In 2010, two permits were issued, and the estimated salmon harvest was 50 sockeye salmon, the second lowest subsistence harvest since 1998 (Appendix C3).

ESCAPEMENT

The Alaska Peninsula Management Area has 307 documented salmon spawning streams, which includes tributaries of some large systems (McCullough 2001). Of the document salmon streams, the South Alaska Peninsula has 224 salmon producing systems, with sockeye salmon found in 37 systems, pink salmon in 204 systems, and chum salmon in 136 systems. A total of 82 coho salmon producing systems have been documented in the South Alaska Peninsula; however, due to budget limitations and poor fall survey conditions, many streams have never been surveyed when coho salmon may be present. The North Alaska Peninsula has 83 salmon producing systems with, Chinook salmon found in 21 systems, sockeye salmon in 55 systems, and pink

salmon in at least 39 systems (McCullough 2001). Chum salmon are present in 73 North Alaska Peninsula systems, and coho salmon have been identified in 50 systems.

The Aleutian Islands and Atka-Amlia Islands Management areas have at least 335 salmon systems, with sockeye salmon present in 45, pink salmon in 319, chum salmon in 11, and coho salmon in at least 35 systems (Murphy 1992).

Most salmon escapement estimates are derived from aerial surveys; although the major sockeye salmon systems are monitored with weirs. In 2010, five salmon weirs were operated by ADF&G in the Alaska Peninsula Management Area: Orzinski Lake, and Ilnik, Bear, Nelson, and Sandy rivers (Figure 2). From 2001 through 2009 the U.S. Fish and Wildlife Service (USFWS) operated a weir at McLees Lake on Unalaska Island. In the recent past, the USFWS in Cold Bay also operated weirs approximately 100 yards below the Frosty Creek Bridge in 2000, near the Frosty Creek mouth in 2001 and 2002, near the outlet of Blue Bill and Outer Marker lakes in 2005, and at Mortensen's Lagoon from 2001 through 2006 (Watchers 2003).

ADF&G has operated the Orzinski Lake from 1929 through 1941, and re-established the weir in 1990 (Figure 2). A weir is important because the Orzinski Lake sockeye salmon run is used to determine commercial salmon fishing periods for the Northwest Stepovak Section, and the difficulties involved with estimating fish from the air (Shaul et al. 1991).

A tripod weir was installed at Ilnik River in 1990 due to difficulties with estimating salmon abundance from the air, and the need to determine fishing periods for both the Ilnik Lagoon fishery (predominantly set gillnet gear) and the Ilnik Section outside the Lagoon (predominantly drift gillnet gear). ADF&G personnel encountered many problems in maintaining a fish-tight weir in 1990 and did not obtain quality escapement data (Shaul et al. 1991). In 1996 the Ilnik weir was modified by using floating weir panels attached to a heavy chain which replaced the tripod weir. The floating panel weir was easier to install and maintain, and remains the current method for enumerating salmon in the Ilnik River (Shaul and Berceli 1997).

A sockeye salmon weir was first operated on Bear River from 1929 through 1932. During this time period, the weir was placed immediately above the mouth of the Milky River (locally called the Mad Sow River). This weir was difficult to construct and supply, and was not operated long enough during the season to estimate the total sockeye salmon escapement based on our current knowledge of the salmon runs. From 1933 through 1952 no salmon enumerating structure was operated at Bear River. From 1953 through 1960 a weir was operated near the current weir location, close to the lake outlet (Figure 2). From 1961 through 1985, a counting tower replaced the weir. Since 1986, a tripod weir has again been used to enumerate Bear River sockeye salmon near the outlet of the lake.

A counting tower was used to enumerate salmon on the Nelson (Sapsuk) River from 1962 through 1988 (Figure 2). In 1989, the tower was replaced with the currently operating floating weir.

A counting tower was operated on the Sandy River at the current weir cabin site, from 1962 through 1964. After 1964, the Sandy River tower project was abandoned due to budget cuts and the fact that the river was often too muddy to count fish from a tower. In 1994, a tripod weir was installed near the old Sandy River tower site. In 2002, the weir was moved approximately one mile downstream to its current location (Figure 2).

Estimated escapements for Chinook, sockeye, pink, and chum salmon for the North and South Alaska Peninsula are presented in Appendix D1. Aerial surveys are used to estimate escapement in systems without a weir and to monitor historical trends in annual escapements. Coho salmon escapements are not monitored in many streams due to the difficulty and expense of conducting surveys during the fall. When presented in other sections of this report, coho salmon numbers are expressed in peak values (the largest number of coho salmon observed in a system in a given year). Escapement estimates in the text are estimated escapements derived from aerial surveys, except for tower or weir counts on the following systems: Bear River and Nelson River (sockeye salmon) from 1962–2010, Orzinski Lake (sockeye salmon) from 1990 to 2010, Ilnik River (sockeye salmon) from 1991 to 2010, Sandy River (sockeye salmon) from 1994 to 2000 and 2002 to 2010, Thin Point Cove (sockeye salmon) in 1994 to 1998, and Middle Lagoon (sockeye salmon) in 1996. The estimated escapement values are likely lower than the actual total escapement as aerial surveys typically underestimate escapement numbers. There are differences after 1984 between escapement figures used in area management reports and those in some formally published reports (technical data reports, bulletins, etc.) due to the use of different methods to estimate escapement. Chinook, sockeye, pink, and chum salmon estimated escapements from 1962 through 2010 are depicted in Figures 8-11.

In 2010, the Alaska Peninsula Management Area estimated Chinook salmon escapement of 9,387 fish was below the previous 10-year average of 21,613 fish (Figure 11; Appendix D1). The estimated sockeye salmon escapement of 913,139 fish was below the previous 10-year average of 1,244,097 fish (Figure 12; Appendix D1). All major sockeye salmon stocks achieved or exceeded escapement goals. The 2010 estimated pink salmon escapement was 775,324 fish, with the vast majority of that escapement occurring on the South Alaska Peninsula (742,912 fish). The South Alaska Peninsula pink salmon escapement was below the 2000-2009 average of 4,169,721 fish as well as the even-year sustainable escapement goal (SEG) range of 1,864,600 to 3,729,300 fish (Witteveen et al. 2009; Figure 13; Appendix D1). The 2010 Alaska Peninsula estimated total chum salmon escapement of 581,322 fish was below the previous 10-year average of 1,175,170 (Figure 14; Appendix D1). However, of the six Alaska Peninsula chum salmon escapement goals (Witteveen et al. 2009), all were met aside from the South Central District and Southeastern District aggregate goal. Coho salmon escapement data collected in 2010 were incomplete due to a variety of reasons (inclement weather, run timing, etc.) but are presented where appropriate in subsequent sections of the Alaska Peninsula Management Reports. Due to cost, logistics, and low availability of suitable aircraft, complete escapement data are not available in the Aleutian Islands and Atka-Amli Islands Areas. For further detailed escapement information including age, length, and sex composition refer to the *Alaska Peninsula Management Area Salmon Escapement and Catch Sampling Results, 2010* (Foster in prep).

Belkofski Bay Section	28442
Deer Island Section	28455
Cold Bay Section	28462, 28465, 28467
Thin Point Section	28475
Morzhovoi Bay Section	28480
Ikatan Bay Section	28490
 <u>Unimak District</u>	 28500 through 28599
Sanak Island Section	28510
Otter Cove Section	28520, 28530
Cape Lutke Section	28540

-continued-

Area	Statistical Areas
North Alaska Peninsula	31111 through 31820
<u>Northwestern District</u>	31111 through 31299
Dublin Bay Section	31120
Urilia Bay Section	31132 through 31142
Swanson Lagoon Section	31152
Bechevin Bay Section (prior to 2000)	31158 through 31160
Bechevin Bay Section (2000 to present)	31160
Izembek- Moffet Bay Section (prior to 2000)	31210 through 31240
Izembek- Moffet Bay Section (2000 to present)	31210 through 31240 and 31158
<u>Northern District</u>	31300 through 31899
Black Hills Section	31310
Caribou Flats Section	31320
Nelson Lagoon Section	31330
Bear River Section	31500 through 31599
Three Hills Section	31610
Bear River Section	31500 through 31599
Three Hills Section	31610
Ilnik Section	31620 through 31699
Ilnik Lagoon	31622
Outer Port Heiden Section	31710
Inner Port Heiden Section	31720
Cinder River Section	31820
Harbor Point to Cape Seniavin	31500 through 31599 and 31412
Cape Seniavin to Strogonof Point	31600 through 31699
Harbor Point to Strogonof Point	31500 through 31699 and 31412
Aleutian Island Area	30200 through 30999 and 31110
Atka-Amlia Area	30500 through 30599

^a In 1985, statistical area 28370 became two areas (28370 and 28375). In 1988, Beaver Bay (28375) became part of the Southeastern District. The balance of 28370 remained in the South Central District. In 1991, statistical areas were changed to reflect Alaska Board of Fish management plans. As an aid in comparing statistics, catches from 1970-90 from statistical areas 28370 and 28375 have been designated as Beaver Bay catches from the Southeastern District. After 1990, these statistical areas were eliminated, Beaver Bay became 28190 (Southeastern District) and the Mino Creek-Little Coal Bay area became 28317 and 28315 (South Central District).

^b In 2001, statistical area 28437 became two areas (28437 and 28439).

Note: Values do not include test fisheries.

^a All exvessel values are estimates based on limited information. Chinook, coho, and chum salmon exvessel values are more certain than those of sockeye and pink salmon.

^b These figures are included in the South Peninsula and total Alaska Peninsula and Aleutian Islands Areas.

Appendix A4.—Alaska Peninsula and Aleutian Islands Management Areas estimated exvessel value of commercially caught salmon by year, species, and gear, 1979–2010.

^a Active permits are defined as follows: all permanent permits, regardless of whether they have been renewed, and interim use and interim entry permits that have been issued. Excluded from Active Permits are any permits that have been revoked and interim permits that have not been issued (renewed) for the given year.

^b Making at least on delivery during the year.

^c During a portion of the season, in specific sections, Area T set and drift gillnet fishermen are allowed to fish in portions of the Alaska Peninsula Area.

^d Confidentiality requirements prohibit the release of this information.

Appendix A7.—Number of Area T permit holders fishing by general location in the Alaska Peninsula area, 1984–2010.

^a Does not include test fish catches.

^b On June 18, 1984 fishermen harvested 23 Chinook, 63,929 sockeye, 1,900 coho, 18,950 pink, and 8,409 chum salmon in Unimak Pass. Unimak Pass was defined as closed to commercial salmon fishing under the Alaska Peninsula portion of the finfish regulations but open to commercial salmon fishing under the Aleutian Islands portion of the finfish regulation book. After 1984, regulations were passed by the Alaska Board of Fisheries closing the Unimak Pass area to commercial salmon fishing until at least July 10.

Appendix B2.—Alaska Peninsula, Aleutian Islands, and Atka-Amlia Islands Management Areas commercial salmon harvest in numbers of fish by statistical area, section, and district, 2010.

Note: Coho salmon escapement estimates are not available due to incomplete data.

^a North Peninsula pink salmon escapement estimates are based on incomplete data.

APPENDIX E. FIELD PERSONNEL

Appendix F1.–Field personnel list, 2010.

Employee	Title	Duties and Location
Bob Murphy	FBIII	Moffet Point to Cape Menshikof Area Salmon Management Biologist, North Peninsula Herring Management Biologist, in charge of salmon AWL data
Aaron Poetter	FBIII	Southeastern District-Alaska Peninsula Area Salmon Management Biologist and South Peninsula/Aleutian Islands Areas Herring Management Biologist, Sand Point
Trent Hartill	FBII	Moffet Point to Cape Menshikof Assistant Area Salmon and Herring Management Biologist, Port Moller
Matt Keyse	FBII	Alaska Peninsula Area Assistant Salmon Management Biologist, Cold Bay
Alex Bernard	FBII	Southeastern District-Alaska Peninsula Area Assistant Salmon Management Biologist and South Peninsula/Aleutian Islands Areas Assistant Herring Management Biologist, Sand Point
Mary Beth Loewen	FB II	Salmon Research Biologist
Steve Hakala	Pilot I	Pilot, Sand Point
Paul Horn	Pilot I	Pilot and Aircraft Mechanic, Chignik
Dawn Wilburn	FB I	Bear Lake Weir
Corey Litwiniak	FB I	Nelson River Weir
Rob Boyce	FWT III	Sandy River Weir
Byron DeMola	FWT III	Ilnik River Weir
Brandon Hummel	FWT III	Orzinski Weir
Carrie Steves	FWT III	Sand Point Fish Ticket Clerk
Sarah Hummel	FWT II	Orzinski Lake Weir
Alexandra Bateman	FWT II	Nelson River Weir
Meesha Murphy	FWT II	Port Moller Catch Sampler
Travis LaPointe	FWT II	Ilnik River Weir
William Jasper	FWT II	Sandy River Weir
Kyle Tidwell	FWT II	Bear River Weir
